Q4 and FY23 Highlights

Mr. Vimal Alawadhi
MANAGING DIRECTOR

"I am delighted to inform you that we have delivered strong revenue from operations of Rs. 1,746 cr. which is a robust growth of 44% over FY22. Our constant focus on introducing the innovative products to cater to farmers need has resulted in BAL introducing many specialised combination products including patented novel combination Ronfen in FY23 which drove the growth during the year. We have also expanded our margins by 427 bps during the year which was driven by change in product mix.

Q4FY23 was difficult for the industry at large due to higher channel inventory and excess supply from China at lower prices. We are working towards introducing more branded products which are focused on Rabi season which will improve breadth of the portfolio and will also make the portfolio more balanced which is currently skewed more towards kharif season.

In line with our commitment to "Make in India", we have embarked on a capex plan to expand our technical capabilities as well as improve backward integration which will lead to lower dependence on China and better cost structure.

Overall, we have an exciting product pipeline ready to be launched in FY24 which are in line with our strategy of introducing more patented and specialised combination products which will help continue strong growth momentum as well as improve our margins in FY24."
